Design a Spacecraft

Use this page to sketch a design idea for a spacecraft, then use it to help inform and build your model.

TO CONSIDER:

What is the mission of your craft?

Where is it going?

How long will it be in space?

How many people will be on it?

What does your craft need to carry?

How will it stay stable as it flies and lands?

How will it withstand extreme cold or heat?

How will it move through space?
